

REQ ID	TYPE	DESCRIPTION	PRIORITY	ACCEPTANCE CRITERIA	RATIONALE (SHORT)	COMMENTS
FR-001	FUNCTIONAL	The system shall generate weekly meal plans strictly adhering to the subscriber's macronutrient constraints and allergen exclusion lists.	HIGH	Pass: Generated weekly menu contains zero ingredients from the subscriber's recorded allergen exclusion list and complies with the specified macronutrient constraints. Fail: Any excluded allergen is included or a specified constraint is violated.	Core functionality of the personalized dietary subscription service and necessary for subscriber safety.	-
FR-002	FUNCTIONAL	The system shall allow subscribers to create and update their dietary profile, including allergies, diabetic restrictions, calorie goals, and macronutrient constraints.	HIGH	Pass: Subscriber can enter and save all supported dietary constraints, and the updated profile is reflected in subsequent meal plan generation. Fail: Any saved constraint is missing or not used when generating the meal plan.	Accurate dietary information is required to generate personalized and appropriate meal plans.	-
FR-003	FUNCTIONAL	The system shall allow subscribers to modify their delivery schedule by pausing, skipping, or rescheduling a meal delivery before dispatch.	HIGH	Pass: Subscriber can successfully pause, skip, or reschedule an eligible delivery, and the updated schedule is displayed in the system. Fail: An eligible modification is not saved or the delivery schedule remains unchanged.	Provides subscribers with flexibility in managing their meal subscription and deliveries.	-
FR-004	FUNCTIONAL	The system shall allow a dietitian to review and update a subscriber's dietary recommendations and meal plan.	HIGH	Pass: Dietitian can access a subscriber's dietary information, make authorized updates to recommendations or the meal plan, and save the changes successfully. Fail: Authorized changes cannot be saved or are not reflected in the subscriber's meal plan.	Dietitian involvement helps ensure that meal plans remain appropriate for the subscriber's metabolic constraints.	-
FR-005	FUNCTIONAL	The system shall track and display the fulfillment status of each scheduled daily meal delivery.	MEDIUM	Pass: Each scheduled delivery displays a fulfillment status, such as Scheduled, Dispatched, Delivered, or Failed. Fail: A scheduled delivery has no status or an updated status is not reflected in the system.	Enables subscribers to monitor whether their scheduled meals are being fulfilled and helps ensure delivery tracking.	-
NFR-001	NON-FUNCTIONAL	The system shall support schedule modifications, including pause, skip, and reschedule requests, up to 12 hours before dispatch.	HIGH	Pass: A modification submitted at least 12 hours before dispatch is accepted according to system rules; requests submitted after the permitted cutoff are handled according to the defined restriction. Fail: The system incorrectly accepts or rejects requests relative to the 12-hour cutoff.	Ensures sufficient operational time to process delivery changes before meals are dispatched.	-
NFR-002	NON-FUNCTIONAL (SECURITY)	The system shall restrict access to subscriber dietary profiles and meal plans to authorized users only.	HIGH	Pass: An authenticated subscriber can access only their own profile, while an authorized dietitian can access assigned subscriber information; unauthorized access attempts are denied. Fail: An unauthorized user can view or modify protected subscriber information.	Dietary and health-related preferences are sensitive information and require controlled access.	-
